

Cabinets

Accessories

The range of cabinet accessories complement the variety of floor standing and wall mounted cabinets. Combined together, these products offer a complete cable patching solution.

Heavy duty castors can be fitted to raise the cabinet clear of the floor and allow the cabinet to be moved across even surfaces. Cage nuts are used to fix internal equipment into the cabinet. Earth bonding kits enable two cabinets to be joined together. Steel plinths fit beneath the cabinet to allow cable access from the base, sides and rear and are available in various widths and depths.
