

Pocket Socket Tester

The Connectix Pocket Socket Tester provides users with a compact sized, quick and easy to use network tester. Its unique snap together design makes it convenient to take on site.

The tester gives an instant indication of the connections present, the four bi-colour LEDs indicate the status of the pairs in the cabling. A separate indicator also shows the shield connection for shielded systems. The circuitry has been specially designed to identify crossover patch cords, but the tester is equally suited to check a single patch cord or a complete channel.

The Pocket Socket tester is simple to use and economical to purchase.

Features & Benefits

- Checks Shielded & Unshielded cabling
